

Passenger Health Safety Protocol

#WeAreGPN #WeCare

In view of the current world health pandemic and the restart of coach transportation in many areas of the world GPN members have developed a series of minimum standards for passenger and employee health based upon industry principles. **We are aware that additional measures dependent upon local regulation in individual member countries will add to these minimum standards.**

Cleaning and Sanitization of vehicles

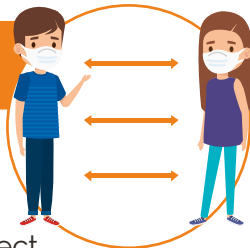

Vehicles are **cleaned and sanitized by professional and trained staff** at the end of each day. During the day, high touch points may also be cleaned.

Sanitization products

Our members have **hand sanitizers available on-board** their vehicles for passengers to use. Also, on demand, for extra protection, members may provide plastic gloves and face masks for passengers.

Social distancing

The **capacity of the vehicles may be reduced** for the safety distance among passengers subject to discussion with our member in each country and regulations.

Training and protection

Our cleaning technicians have been trained on procedures and process. Personal protective equipment such as **masks and gloves** are supplied to provide a safe working environment.

Our Drivers

Many of our profession drivers will wear masks. Around the driver's area, there will be **area of separation and marked accordingly.**

THESE ARE GUIDELINES ONLY.

Customers should request additional information from each GPN operator. Countries around the world are continuing to change regulations on a daily basis and we encourage you **contacting your GPN operator for further guidance.**
